

Bug name	How to solve
Wrong path name for templates	<ol style="list-style-type: none"> After run bookings app, we can't load the home page. The log shows like this: <p>2022/04/01 10:44:46 Connected to database INFO 2022/04/01 10:44:46 Starting mail listener! Starting application on port: :8080 2022/04/01 10:44:55 Hit the page: localhost:8080/ 2022/04/01 10:44:55 Could not get templates from cache 2022/04/01 10:44:55 Hit the page: localhost:8080/favicon.ico</p> Conclusion: Function Template can't get the template from disk. But it still get favicon.ico → After a few checking, I found that the problem due to the path to html template. → From the root folder of project, correct the path to templates folder. Rerun app and reload homepage.
Wrong Postgres query syntax	<ol style="list-style-type: none"> query wrong in func InsertRoomRestriction query := ` insert into room_restriction (start_date, end_date, roomID, reservationID, created_at, updated_at, restrictionID) values (\$1, \$2, \$3, \$4, \$5, \$6, \$7) ` Conclusion: Taking the error and search in google → Stackoverflow → Problem happens when query database (non-exist column). Correct query <pre>query := `insert into room_restriction (start_date, end_date, room_id, reservation_id, created_at, updated_at, restriction_id) values (\$1, \$2, \$3, \$4, \$5, \$6, \$7)`</pre> Perform again insert query, go to Dbeaver to check room_restriction table
Can't query data in another Postgresql database	<ol style="list-style-type: none"> Error: "cant find table and cant query cross-database" My solution: Correct access to the database that need to query. I also found way to query cross-database, maybe using in future: https://stackoverflow.com/questions/48475220/join-tables-from-different-databases-postgresql
